

CATER-ICE

CATER-ICE COMMERCIAL ICE MAKERS

INSTALLATION, USE & SERVICE MANUAL

*please read this manual carefully prior to use
& keep it in a convenient place for future reference.*

CK20100

Thank you for purchasing our Cater-Ice Automatic Flake Ice Maker!

To ensure the proper operation of this ice machine, please read the instruction manual carefully before use and please keep near the product!

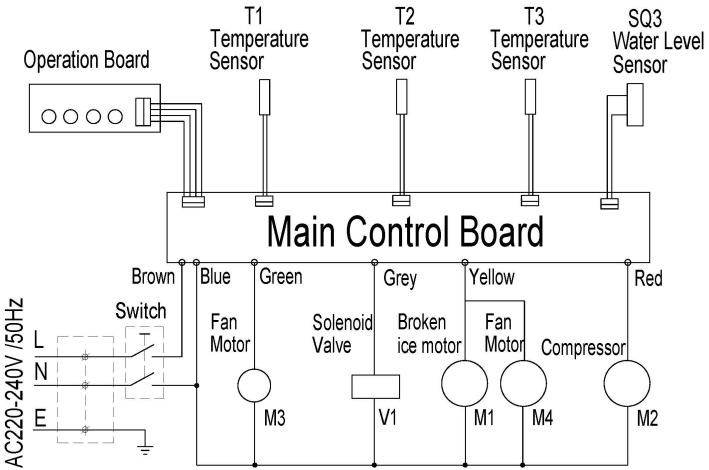

CATER KWIK, The Lakeland Catering Centre, Newlands, Ulverston, Cumbria, LA12 7QQ

CATER-KWIK

The symbol  on the product or on its packaging indicates that this product may not be treated as household waste. Instead it shall be handed over to the applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences for the environment and human health, which could otherwise be caused by inappropriate waste handling of this product. For more detailed information about recycling of this product, please contact your local city office, your household waste disposal service or the shop where you purchased the product.

FEATURES:

Our series automatic flake ice makers are designed in stainless steel flat front panel and flat door for nice appearance. Many advantages of the ice maker are available, such as ice making quickly, great ice making capacity, nice ice shape and ice dropping quickly. Tap water inlet→water incoming→ice making→crush ice→ice dropping→ice storing, all these processes are automatically controlled for ice making continuously. In case of water shortage or ice full in cabinet, the indicator on the operation board will light on accordingly and the ice maker will stop operation automatically. Also, the remaining water after ice made each time is used recycling. So not only the water is saved, but also the ice making efficiency is enhanced and the energy consumption is reduced, and the customer’s ice making cost is also reduced much. The ice storage cabinet is PU foamed, so it is insulated well and it could prevent the ice made from melting. Either purified water or the tap water could be used for ice making.

NOTES BEFORE OPERATION:

1. The incline angle of the cabinet could not be over 45° during transportation. Don't make ice maker upside-down in case the compressor or refrigerating system troubles occur.
2. The flake ice maker should be placed on horizontal and structurally sound ground and away from heat source and corrosive gas. At least about 150mm room should be left around the ice maker to ensure the fine ventilation.
3. Before using the ice maker for the first time, you should wait 12 hours after positioning it in a proper place.
4. Voltage range: According to the nameplate
5. The rated capacity of wire should be over 6A, the section area of the wire is 0.75mm². The wire could be consisted by single ply or

Compressor does not work.	1. Water shortage. 2. Ice full.	1. Check the water supply system (water valve and water supply tube). 2. Take off some ice.
Compressor works, but no ice is made.	1. Refrigerant leakage. 2. The refrigerating system is blocked.	1. Recharge the refrigerant and check the leakage again. 2. Charging N2 to check whether the system is blocked and replace the filter. 3. Check whether the fan is running.
The trouble light is always bright	The flake ice don't completely Bleak off.	Check whether the solenoid valve can be opened,if not,change a new solenoid valve.
The ice-full light flickers	The ice-full sensor does contact well or it is damaged.	Change a new ice full sensor.
Water shortage indicator and ice full indicator are glittering at the same time.	If water inlet jam or running failure because of low environmental temperature.	Stop the machine unit the tempeatuer reach 10 C or repair it by authorized service people.

TENCHNICAL PARAMETERS

Model	Ice making capacity (Kg/24h)	Power input (W)	Ice storage (kg)	Dimensions (mm)
CK20100	100	680	20	548×610×823

Note: The ice making capacity based on the water temperature 10℃, Ambient temperature 15℃ .

The specifications are subject to be changed without notice.
Please check the nameplate for sure.

TROUBLE AND SHOOTING

(FOR REFERENCE OF USERS AND TECHNICIANS)

TROUBLE	CAUSE	REMEDY
The ice maker does not work.	1. The voltage is lower than the lower limitation 2. The ambient temperature is too low (Lower than 5℃)	1. Stop the ice maker and restart it until the voltage is normal. 2. Try again when the ambient temperature higher than 5℃ .
Water shortage indicator light on.	1. Water shortage from the water supply system. 2. Water valve damage. 3. Tap water pressure too low.	1. Check the water supply. If it is OK, restart the maker. 2. Check the water valve. 3. Be sure the tap water pressure is higher than 1.5 bar.

6. The separate three-pole outlet should be used and the grounding must be good.

7.If the supply cord is damaged,it must be replaced by the manufacture,its dervice agent or similarly qualified persons in order to avoid a hazard.

8.Flake Ice maker connect to potable water supply only.

9.This appliance is not intended for use by children or other persons without assistance or supervision if their physical, sensory or mental capabilities prevent them from using it safely. Children should be supervised to ensure that they do not play with the appliance.

10.Warning: Fill with potable water only.

11.Please don't place the machine near flammable materials and be sure the venetilattion of both sides with slots of the machine.

12.The new hose-sets supplied with the appliance are to be used and that old hose-sets should not be reused.

STRUCTURE:

- | | | |
|-----------------------|-----------------------|----------------------|
| 1. Switch | 5. Ice Shovel | 9. Water Outlet Tube |
| 2. Operation Board | 6. Back Panel | 10. Foot Screw |
| 3. Door | 7. Power Cable | 11. Water Inlet Tube |
| 4. Temperature Sensor | 8. Screw for Drainage | 12. Drainage Tube |

OPERATION PROCEDURES:

1. Unpack the package and take out the attached documents and spare parts such as the water inlet and outlet tubes, ice shovel and gaskets, etc.
2. Position the ice maker on a well ventilated place and leave at least 150mm room between the ice maker and the wall. Be sure the ice maker is positioned levelly and away from the heat source.
3. Make one end of the ϕ 12 flexible plastic corrugated pipe (supplied with the maker) connected with the water outlet tube on back of the maker, another pipe end should be placed in a container for surplus water (prepared by user himself) or in the sewer.
4. Make one end of the water inlet tube (supplied with the maker) connected with the 3/4" screw type connector of the water tap so as to get the drinkable tap water. The water pressure of water supply pipe is 1.5 ~ 3 bar. The other end of the water inlet tube should be connected with the screw type connector of water valve on the back of the ice maker. Be sure to put gaskets (supplied with the maker) in both ends of the water inlet tube before connecting. If it is an ice maker for purified water, a ϕ 12 corrugated pipe (supplied with the maker) should be used. Connect one end of the pipe with the purified water supplier (desk-top water dispenser) and another end with water valve connector on the back of the ice maker. The desk-top water dispenser should be placed on the ice maker at the back position.
5. Insert the plug into the power supply socket and switch on the power switch, it will light if power supply is ready. Then the machine begins to work. All the procedures, water inlet→ice making→crush

ice→ice dropping→ice storing, are controlled automatically for ice making continuously. If ice is full in the ice storage container, the ice full indicator on the operation board will light on and the ice maker will stop automatically. If there is a water shortage or something wrong with the water supply system, the Water shortage indicator will light on and the ice maker will stop operation automatically.

MAINTENANCE:

1. If the compressor stops for any reasons like water shortage, too much ice, power off, etc., don't restart it right away. You can restart it about 5 minutes later.
2. Check regularly the connectors of the water inlet and outlet tubes and drain the little surplus water that may leak.
3. If the ice make will be unused for a long period, please switch off the power switch and wipe the inner liner of the ice storage container with a clean rag.
4. When plugging or unplugging, the plug should be held by hand and the wires should not be dragged heavily.
