Warranty Coverage Guidelines

Parts not covered by the warranty-

User Error.

User misuse or negligence

Faults caused by environmental factors such as hard water, power irregularities, inadequate or non-compliant installation, insufficient or inadequate services, blockages in waste and drainage systems.

Equipment that has been repaired, tampered with or modified by anyone other than a caterkwik operative / representative and will not accept liability for any damage or faults as a result.

Faults to and/ or due to the failure of consumable components, such as doors/seals, light bulbs, switches, glass and removable items are not covered under warranty.

Limescale Damage.

If any damages to machine components are caused by machine misuse this will be chargeable.

CATER WASH

Preventative Maintenance

B5 MAINTENANCE -

- Descale the boiler, the internal surfaces of the tank and the appliance water piping once or twice a year.
- Descale the rinse and wash jets every month using vinegar or a descaling agent.
- The internal hose of the rinse-aid and detergent peristaltic dispenser should under go periodic maintenance (once or twice a year).

DISHWASHER DOES NOT WASH WELL -

1. Check if the suction filter is dirty and clean it thoroughly.
2. Check if the wash jets are clogged by solid food remains.
3. Check that the initial amount of detergent or subsequent additions are correct.
- . 4. The selected wash cycle is too short. Repeat the cycle.
5. Check that the dishes are stacked correctly in the racks.

GLASSES AND DISHES ARE NOT DRIED PROPERLY-

1. Check the instructions for the amount of rinse-aid.
2. Check that there is rinse-aid in the container and if necessary top up.
3. Check the set amount of rinse-aid.

CONDENSATION ON GLASSES -

1. Check that there is rinse-aid in the container and if necessary top up.
2. Check the set amount of rinse-aid.
3. Remove the rack of glasses immediately the cycle has ended

CATER WASH

Preventative Maintenance

STAINS ON THE GLASSES-

1. Only use "non-foaming" products for professional dishwashers

EXCESSIVE FOAM IN THE TANK-

1. Check if the amount of product dispensed by the detergent dispenser is excessive.
2. Ensure that the tank has not been cleaned with unsuitable cleaners. Drain the tank and rinse thoroughly before new wash cycles.
3. If a foaming detergent has been used, drain and refill the tank with water until the foam disappears.

. SMEARS OR SPOTS ON THE GLASSES -

1. Reduce the amount of rinse-aid

THE WASH OR RINSE ARMS TURN SLOWLY -

1. Remove and thoroughly clean the arms.
2. Clean the wash pump suction filter.

Preventative Maintenance- Undercounter Dishwashers

A common problem, that our customers report, is due to poor maintenance of the **air trap**.

The **air trap** is located on the back wall inside the washing chamber (Pic 1).

A build up of dirt behind the metal protection means the machine may either over or under fill.

This problem ISN'T covered by our warranty due to lack of maintenance.

To solve the problem simply remove the 2 metal nuts, give the area a quick wipe and replace (Pic 2).

This only needs completing monthly.
