

R

repel

APPEARANCE	white dispersion
REACTION	weakly cationic
STORAGE	above 5°C
STANDARD PACK SIZE	10ltr

## Water repellent finishing agent for application to final rinse

- ✓ Durable finishing product for water & oil-repellent textiles.
- ✓ Effective on horse blankets, coats and outdoor workwear jackets.
- ✓ Safe, high performance formulation.
- ✓ Incredible value compared with traditional commercial brands.
- ✓ For use in the final rinse, no need to dry items before proofing.

### How to use

Use either as a manual addition or apply in the final rinse. For best results clean item first. No need to dry before proofing. Follow care label instructions. For machine washing, apply 100-500ml per re-proof in the final rinse cycle. Leave item to air dry.

Alternatively, can be diluted 1:1 with water and sprayed or brushed onto items in a well ventilated area. Apply 100-500ml of dilution per item (depending on fibre type and requirements), making sure application is thorough and even.

Water and oil-repellent effects can be impaired by residues of auxiliaries on goods being finished, particularly when silicone-containing finishing oils or softeners are used.

For further process information speak to an Ideal technical representative.

### Health & safety

Available on request. Store above 5°C.
