

COFFEE QUEEN

JUICE DISPENSER

NORDIC

Nordic is a machine that offers three different juice alternatives and chilled water with a perfect temperature. High capacity with 325 glasses an hour reduces the risk of long waiting for the popular beverages. Nordic is very easy to manage and operate since the machine is developed to reduce the amount of components. Nordic comes with optional decanter function.

SL 2000

The machine offers two juice alternatives and water. Here as well, you and your guests can choose to have the juice served with or without fruit pulp. The illuminated front sign is, likely to all the other machines, easy to change to suit the design and message for your environment. A machine that is very easy to care for, both for management and for cleaning.

SLIMLINE

A machine that is easy to place thanks to its slim design. Slimline is serving juice with or without fruit pulp and also water. The mixture ratio is adjustable and the machine has a storage space for 2 x 10 litres bag in box, just like the SL 2000. Obviously the Slimline is just as easy to manage as our other machines.

FACTS

| Modell | Bag-in-box | Capacity approx. |
