

Platelet Agitator and Racks

Labcold Platelet Agitators are manufactured in the UK and are classified as Medical Devices in accordance with Directive 93/42/EEC. They have been engineered to agitate at the correct speed as defined by the World Health Organisation.

Labcold Platelet Agitators can accept either a six tray or an eight-tray rack. When used in conjunction with a Labcold Incubator the agitator stops when the door is opened and resumes movement when the door is closed.

To ensure the platelet bags do not come off the agitator racks, anti slip mats can be purchased.

All Labcold Agitators and Racks come complete with a full **FREE** 1 year parts and labour warranty.
