ConnectedCooking.
 Convenience.
 Security. Inspiration.

ConnectedCooking.
 Connect your kitchen.

"With ConnectedCooking, I am always kept updated on what is happening in my kitchen and can even intervene when I am not there. It's also great to easily distribute cooking programmes to all the units in my kitchen."

Alex Gower, CFO, Cobb & Co.,
 restaurant chain, Tauranga, New Zealand

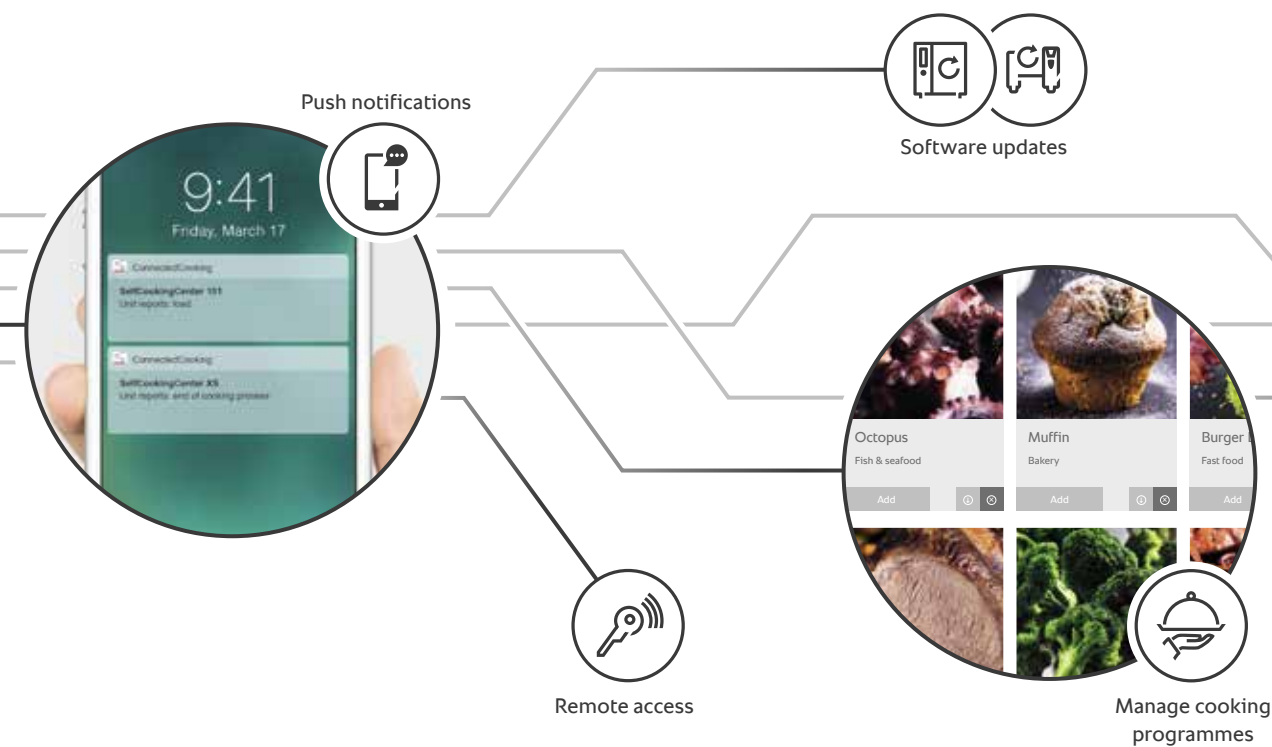

ConnectedCooking is the latest network solution for professional kitchens. Whether you use one or more RATIONAL units, ConnectedCooking offers your customers completely new and convenient application options. The only thing you need to do is connect your RATIONAL unit or even your FRIMA VarioCooking Center® to a network.

Let yourself be inspired by ConnectedCooking: You can simply do away with time-consuming tasks, you will always be supported when you need it and you will get the consistency you expect in your business.

The service is free for up to three connected units. For more units, you will find your personal offer directly at ConnectedCooking.com or simply contact us.

Always under control. Totally convenient.

Whether it's the SelfCookingCenter®, VarioCooking Center® or CombiMaster® Plus – with ConnectedCooking you can always have everything in sight.

Push notifications

Receive notifications on everything that is happening on and in your units. Whether it's a load, ready or service notification, all information will be conveniently sent to you in real time, exactly where you want it.

Remote access

Remote access will allow you to easily operate all connected SelfCookingCenter® units from your smart phone or PC. You can see exactly what settings are applied on your unit and can even modify those settings. In the unit overview, you can use the residual time and the current climate to quickly find a unit in which you can add an appropriate product or to see which unit will be free next.

Transfer and manage cooking programmes

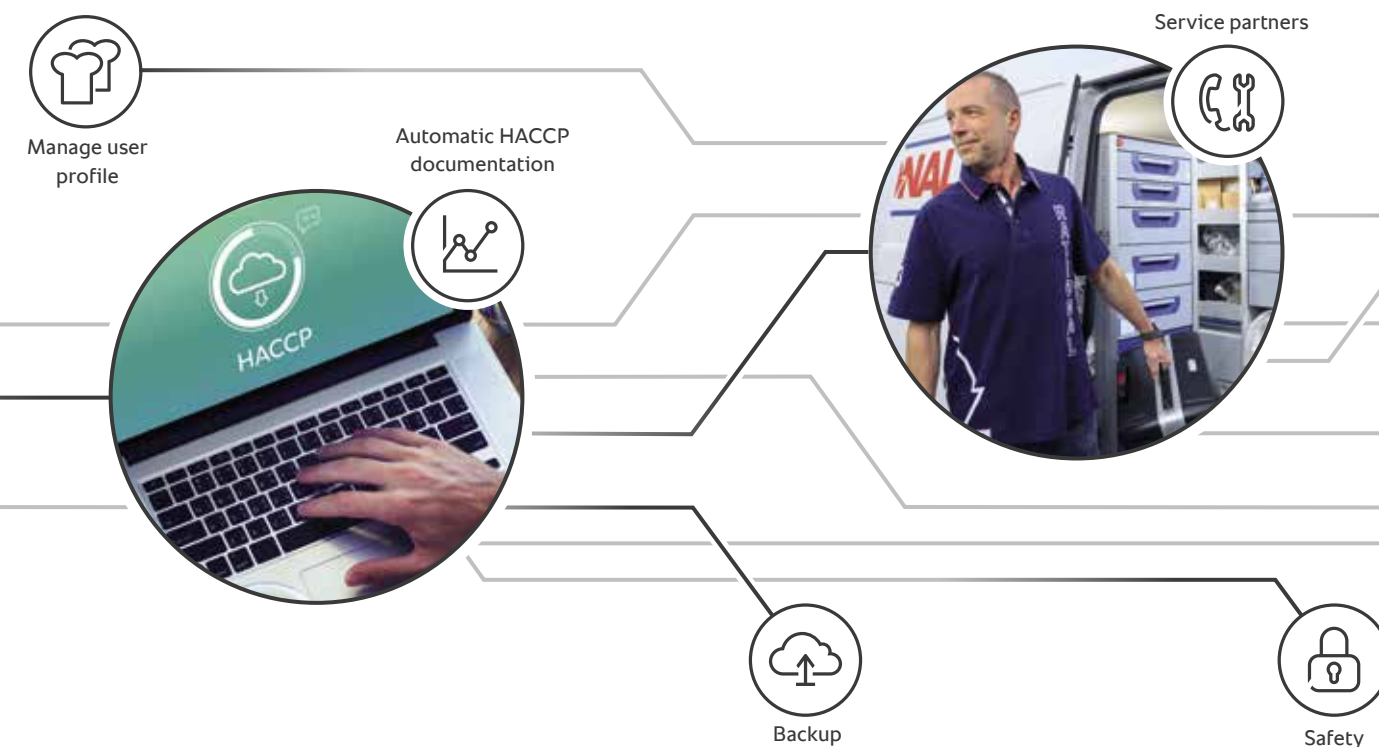

Distributing cooking programmes will then become child's play. You select which cooking programme you want to send to which unit, and that's it.

Software updates

Quickly and reliably bring your units up-to-date with the latest technology: Updates are always provided to you free and automatically. Just start the update, that's it.

If you acquire additional RATIONAL units, you can quickly transfer your personal appliance settings to the new unit. This ensures that the settings on all your units are always what you want them to be. ConnectedCooking even changes the summer time to winter time automatically.

Always on the safe side. Totally automatic.

Safety is one of the greatest challenges in modern kitchens. Increased demands by supervisory authorities and demanding hygiene regulations make for a significant administrative workload. Error notifications must also be excluded as far as possible. ConnectedCooking will support you in this and makes everything easy.

Automatic HACCP documentation

Log and document all important HACCP data fully automatically. All relevant data from all connected units is logged, clearly presented and saved. Of course, you can export all data in table format or PDF format at the click of a button, this data can be saved separately or printed.

Communicate with Service Partners

Should something not be right with your unit, you or your Service Partner if required, will receive a message. Based on the service data read, the right decisions can be made immediately for the purposes of fast troubleshooting.

Manage user profile

So that a ConnectedCooking can only do what it is authorised to do, you can manage any user profile. Every user will then only see their functions and this ensures that application errors are reduced to a minimum.

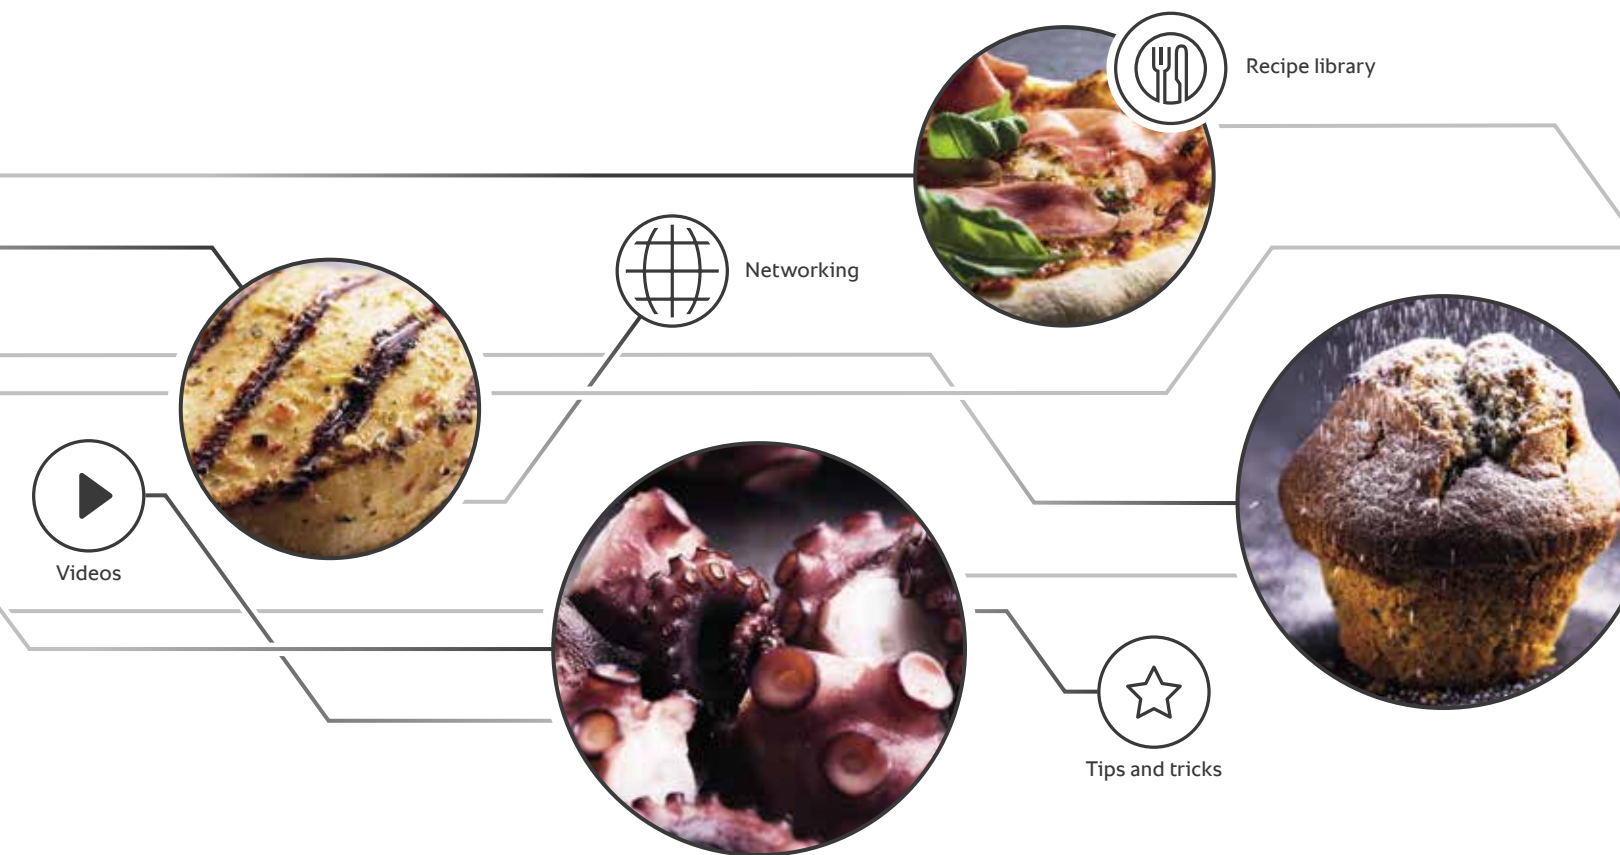

Backup unit settings

Automatic backups of data and settings provide data security at all times.

Latest encryption technology

To ensure that all data transmissions are protected from abuse, the information is exchanged with the latest encryption technology. This means only the right recipient processes and views the data - which means the data is always secure.

Always offering new ideas. Totally inspiring.

Would you like to impress your customers with more variety, delicious dishes and great results? Get new ideas from colleagues and our master chefs. A new world of inspiration will open at the click of a button.

Full recipe library

Browse through the thousands of international recipes and download what you like onto your devices. All recipes contain serving information, detailed descriptions and the appliance settings. It doesn't get any easier.

Tips and tricks from our professionals

You will also find many tips and tricks from our experienced master chefs. So achieving your best cooking results become even easier and quicker.

Application videos

In addition to many video examples on the preparation of various dishes, you will also find many filmed operating instructions. So you will quickly learn how to programme, clean or create shopping carts.

Networking

If you like, you can network, talk and "talk shop" with colleagues worldwide. You will have access to one of the largest networks of international chefs and master chefs. Be there at the click of a button.

Always there for you. Totally safe for the future.

To connect units with ConnectedCooking, they must be connected via a network. For this purpose, all SelfCookingCenter® units built since 03/2017 are equipped with an Ethernet connection as standard. This means the unit can be connected to your network either by LAN cable or even a WLAN module.

Registering units for ConnectedCooking is extremely easy using your smartphone, tablet or PC. The connection is established automatically and then it is ready to use.

Units built before 03/2017 can also easily be retrofitted with an Ethernet port and integrated in ConnectedCooking. In principle, all SelfCookingCenter®, CombiMaster® Plus and VarioCooking Center® (built from 10/2011) units can be integrated in the ConnectedCooking world.

	HACCP	Cooking programme	Updates	Push notifications	Service data	Remote access
