

Kitchen Management System

KitchenManagement System.

Your virtual assistant.

Thanks to the new KitchenManagement System, you can manage your RATIONAL appliances directly from your PC. With the control console function, you'll be able to keep an eye on what's happening at all times. If required, operate all RATIONAL units connected to the network at the click of a mouse from your PC. All the important HACCP data is automatically logged and archived for you. You can create your own cooking processes in a matter of seconds and send them to all units connected to your network at the same time. You also have free access to numerous RATIONAL cooking processes and recipes on the internet.

e.g. branch 1,
"School" kitchen

e.g. branch 2,
"à la carte" kitchen

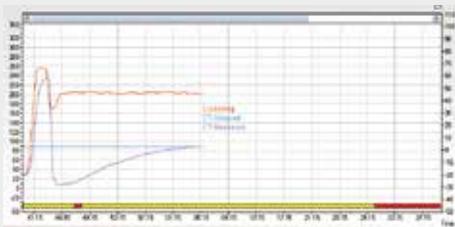

For up to 30 RATIONAL units with the Ethernet option;
> 30 units on request

LAN or WLAN network
(provided by customer)

USB flash drive with
KitchenManagement System software

Your benefits

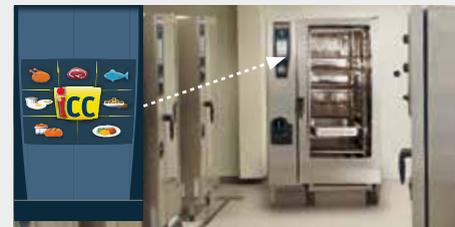

100% hygienic safety

Fully automatic HACCP documentation guarantees hygienic safety at all times. All cooking processes are documented exactly, securely and in line with HACCP requirements and then saved in the HACCP archive. If required, the data is analysed and displayed in tables or graphic form.

Easy creation of cooking processes

You can create your first cooking process in just a few seconds. Of course, the cooking processes can be automatically sent to all connected units. This means a menu change in multiple branches is extremely easy to implement. (not for CombiMaster® Plus)

Everything at a glance with control station

All SelfCookingCenter® units can be monitored with the virtual control panel and even controlled remotely. Simply operate the SelfCookingCenter® at the click of the mouse on the PC – even at long distances. (remote control with virtual control panel not for CombiMaster® Plus)

Installation made easy

Insert USB drive, start programme, launch the setup wizard, done. Once all RATIONAL units on a network are connected to your PC, the KitchenManagement System can also control the units remotely.
